Ceramic WET Lube
All the features of Finish Line's WET lube plus the performance attributes of ceramic boron nitride and micron particles of fluoropolymer.

WET Lubricant
features durable, high viscosity synthetic oils, special water-repelling polymers, rust & corrosion additives, and molybdenum friction modifiers.

1-STEP Cleaner & Lubricant features a "clean & lube" formulation that loosens and removes surface grime, while delivering a clean, low friction film of lubricant.

DRY Teflon Lube features Teflon® fluoropolymer and specialized synthetic oils. Goes on wet, but then sets up in a dry, durable "wax-like" film.

WAX Lubricant features DuPont's metal bonding Krytox® lubricating film in combination with M2 molybdenum and a very hard, dirt-repelling wax.

Ceramic WAX Lube
All the features of Finish Line's WAX lube plus the performance attributes of ceramic boron nitride and micron particles of fluoropolymer.

RECOMMENDATION

Perfect for competitive cyclists who demand ultimate drivetrain smoothness & quietness with maximum lube intervals.

RECOMMENDATION

Perfect for hard-riding cyclists who require smooth riding over long distances, especially in wet or extreme conditions.

RECOMMENDATION

Perfect for commuters & recreational cyclists who seek a simple and effective solution to drivetrain maintenance.

RECOMMENDATION

Perfect for mountain bikers who require consistent drivetrain efficiency and cleanliness in many types of riding conditions.

RECOMMENDATION

Perfect for bicycles used or stored indoors, transported in cars, and used in dusty conditions.

RECOMMENDATION

Perfect for triathletes who demand ultimate drivetrain cleanliness, with longer lubrication intervals.

Finish Line: The Lube Experts since 1988.
