

GEAR FLOSS

Finish Line™ **GEAR FLOSS™**

MICROFIBER ROPE

The Ultimate Detailing Tool!

Finish Line Gear Floss is perfect for cleaning your rear cassette, front chain rings, derailleur pulley wheels, hubs and spindles, brake arms, bottom bracket / crank interface, and more.

HOW MICROFIBER WORKS:

Microfibers attract, remove and hold grime. Other materials simply move it around. Microfiber does this by capturing dirt, grease and particles inside its star-shaped grooves. Dirt is held deep inside the core of the fiber. Microfibers remove grime better than any other material known to man! Microfiber rope is highly tear-resistant and it is washable.

Easy to Use!

- 1.** Position floss between gears
- 2.** Slide back and forth
- 3.** Slide into other hard-to-clean areas like derailleur pulley wheels, hubs and spindles, brake arms, bottom bracket / crank interface, etc.
